

Anolis roosevelti

Culebra Island giant anole

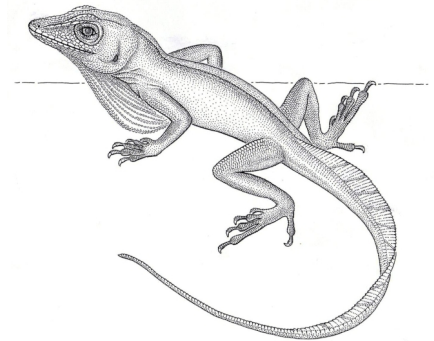

Family (Dactyloidae)

Kingdom (Animalia)

Status (Endangered)

Description

A large anole with a slender, pointed head and a relatively robust body. It has brownish-gray coloration with two light lines along each side of the body, a light spot on each temple, yellow eyelids, and a gray dewlap with a light-yellow portion. The tail is yellowish-brown, and the underside is whitish.

Last seen in 1931. No picture is available.

Location/Habitat

Found on Culebra Island, Puerto Rico, particularly in the remaining forested regions of the island, including areas such as the Flamenco Peninsula. The species is arboreal and associated with tall forest habitats dominated by large Ficus and gumbo-limbo (Bursera) trees, where it lives high in the canopy. These habitats consist of relatively undisturbed forest patches that provide tree cover, feeding areas, and shelter.
