

Chilabothrus granti

Virgin Islands tree boa

Family (Boidae)

Kingdom (Animalia)

Status (Endangered)

Description

Is a small, Endangered, non-venomous snake endemic to the Puerto Rico Bank (Puerto Rico, U.S./British Virgin Islands), reaching lengths of 2–4 ft (60–120 cm). It has a light grey-brown body with dark, black-edged blotches, a slender shape with an arrow-shaped head, and shows distinct purple-blue iridescence.

Location/Habitat

Is an endangered species endemic to Puerto Rico and the Virgin Islands (U.S. and British), found in limited, scattered populations. They primarily inhabit subtropical dry forests and subtropical moist forests, occupying shrublands, woodlands, and coastal areas, often with high densities of Vines and interlocking tree canopies.
