

Chilabothrus inornatus

Puerto Rican boa

Family (Boidae)

Kingdom (Animalia)

Status (Endangered)

Description

The color is somewhat variable but usually ranges from pale to dark brown, sometimes grayish, with 70 to 80 darker colored blotches along the back from neck to vent. These dorsal blotches are generally dark-bordered with the centers of a lighter hue. Maximum size is approximately 6 and a half feet.

Location/Habitat

Is endemic to the island of Puerto Rico, primarily inhabiting forested areas, rocky foothills, and karst regions across the island. They are highly adaptable habitat generalists found in rain forests, mangrove forests, caves, and altered landscapes like plantations and urban surroundings.
