

# *Chilabothrus monensis*

Mona boa

**Family** (Boidae)

**Kingdom** (Animalia)

**Status** (Threatened)

## Description

The Mona boa is a nonvenomous snake that grows to about 1 meter in length. The ground color of the mature individual is light brown dorsally, with 44 dark brown markings. The underside is beige with a few scattered spots. On immature individuals the upper surface ground color is a very light yellowish brown with dark brownish markings.

## Location/Habitat

Is a critically endangered species endemic solely to Mona Island, located in the Mona Passage between Puerto Rico and Hispaniola. They inhabit dry coastal forests, rocky plateaus, and scrublands, utilizing trees such as *Gymnanthes lucida* and *Capparis* species for hunting and shelter.
