

Daphnopsis helleriana

No common name

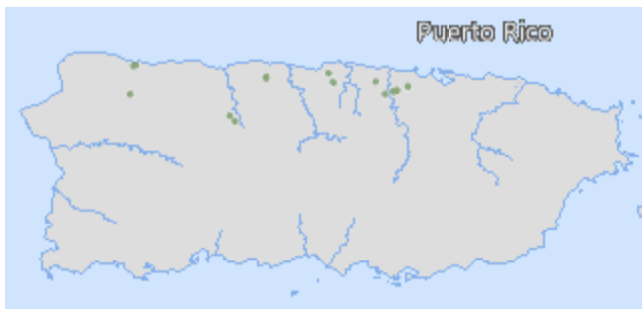

Family (Thymelaeaceae)

Kingdom (Plantae)

Status (Endangered)

Description

It is an endemic shrub or small tree found in northern Puerto Rico and is endangered. It reaches up to 6 meters in height, has simple, elliptical, leathery leaves, and small, whitish or greenish, dioecious flowers.

Location/Habitat

It grows in moist, undisturbed limestone forests (mogotes) and semideciduous forests, specifically found in areas within the Río Abajo State Forest, Guajataca State Forest, and locations near Arecibo, San Sebastián, Quebradillas, Camuy, and Dorado.
