

Eugenia woodburyana

No common name

Family (Myrtaceae)

Kingdom (Plantae)

Status (Threatened)

Description

Is a small evergreen tree endemic to Puerto Rico. It's a federally listed threatened species, facing threats like habitat loss and degradation. The tree can reach up to 6 meters (19.8 ft) in height. Its leaves are opposite, obovate, and pubescent (hairy) on both sides. The fruit is an eight-winged, globose berry, red when mature, and approximately 2 cm (0.8 in) in diameter.

Location/Habitat

From the municipality of Cabo Rojo in the south-west, eastward to the municipality of Salinas in the south. Additionally, the species has been propagated in tree nurseries and planted at 9 sites: Cabo Rojo National Wildlife Refuge, Laguna Cartagena National Wildlife Refuge, Gabia Farm, Toa Vaca Conservation Area, SCF, Cueva El Convento, Caguas Botanés, Pied Doñas Garden and Garden Botanical Garden.
