

Goetzea elegans

Beautiful goetzea

Family (Solanaceae)

Kingdom (Plantae)

Status (Endangered)

Description

It is an evergreen shrub or small tree endemic to Puerto Rico. It belongs to the Solanaceae family, reaches up to 9 meters in height, with dark green, elliptical leaves, funnel-shaped orange flowers, and yellow, possibly poisonous, berries.

Location/Habitat

Tree endemic to the semi-evergreen limestone forests of northern Puerto Rico, primarily within the Guajataca Gorge area of Isabela and Quebradillas. It thrives at low elevations, often found in limestone hills (karst region).
