

Ilex cookii

Cook's holly

Family (Aquifoliaceae)

Kingdom (Plantae)

Status (Endangered)

Description

It is a shrub or small tree endemic to Puerto Rico, critically endangered. It is characterized by being evergreen, reaching 1.5 to 2.4 meters in height, with alternate, leathery (stiff) and glossy dark green leaves.

Location/Habitat

Exclusively in the high-elevation elfin forests of the Central Cordillera in Puerto Rico. It is specifically restricted to the summits of Cerro de Punta and Monte Jayuya within the Toro Negro Commonwealth Forest.
