

Ilex sintenisii

No common name

Family (Aquifoliaceae)

Kingdom (Plantae)

Status (Endangered)

Description

Ilex sintenisii, is a shrub or small tree endemic to Puerto Rico, specifically found in the Luquillo Mountains. It's characterized by small, notched leaves, white flowers, and green, immature fruits. It's currently listed as an endangered species due to habitat loss.

Location/Habitat

It is distributed between two peaks: Pico El Yunque and Pico del Este and along their access roads, where a total of 465 individuals have been reported at three sites. However, the species' prime habitat lies in inaccessible areas that have not been surveyed.
