

Mitracarpus polycladus

No common name

Family (Rubiaceae)

Kingdom (Plantae)

Status (Threatened)

Description

Mitracarpus polycladus is a rare species of flowering plant in the coffee family known by the common name cana gorda girdlepod. It is native to Puerto Rico, where it is known only to come from the Guánica Commonwealth Forest. It can also be found on the island of Saba.

Location/Habitat

Mitracarpus polycladus is a small shrub known to occur in Puerto Rico, Saba Island in the Lesser Antilles, and Anegada Island in the British Virgin Islands. In Puerto Rico, *M. polycladus* occurs in the southern karst region in the municipalities of Guánica, Yauco, and Guayanilla.
