

Setophaga angelae

elfin-wood warbler

Family (Parulidae)

Kingdom (Animalia)

Status (Threatened)

Description

A small bird with black plumage on top and white plumage with black stripes on the underside. It is distinguished by white spots on its face, an incomplete eye ring, and white markings on its tail. Its eyes are dark brown.

Location/Habitat

The *Setophaga angelae* (elfin-woods warbler) is found in Puerto Rico, specifically in El Yunque National Forest (east) and Maricao Commonwealth Forest (west), with additional presence in Toro Negro and Carite forests in the central mountains. It lives at high elevations on mountain summits, in dense elfin (dwarf) forest vegetation with short, twisted trees.
