

Solanum conocarpum

marron bacora

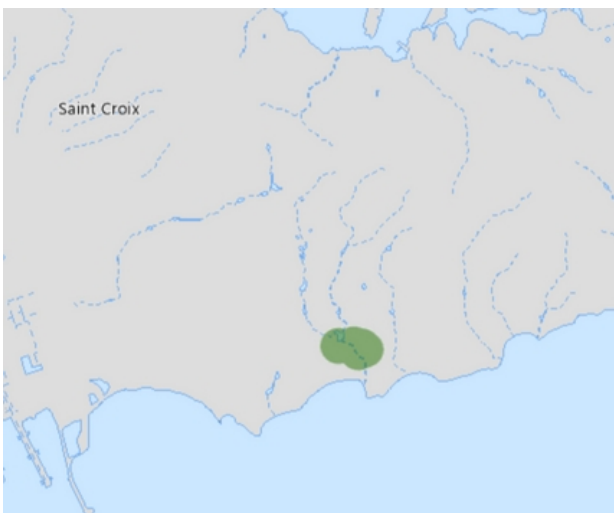

Family (Solanaceae)

Kingdom (Plantae)

Status (Endangered)

Description

A perennial shrub in the nightshade family (Solanaceae) that can grow up to about 3 meters tall. It has purple flowers with yellow anthers and produces fruits/seeds, but its natural seed dispersal mechanism is still unknown. Its reproductive biology may involve separate male and female plants, although recent observations suggest it may also be capable of self-pollination

Location/Habitat

The species *Solanum conocarpum* is found in the U.S. Virgin Islands (St. John) and the British Virgin Islands (Tortola). It occurs in dry, deciduous forests, typically in exposed, disturbed areas such as slopes, ridgelines, and erosion zones, often on poor, dry soils..
