

Solanum drymophilum

erubia

Family (Solanaceae)

Kingdom (Platae)

Status (Endangered)

Description

A thorny shrub that can grow up to 5.5 meters tall. It has elongated leaves covered with small, star-shaped hairs and stiff thorns along the leaves and branches. Its young shoots are also covered with whitish hairs. It is characterized by its dense, defensive appearance.

Location/Habitat

Found in evergreen forests on volcanic soils, at elevations between 1,000 and 3,000 feet (300 to 900 meters). Its only known population is located in the Cayey area, specifically in a zone of volcanic outcrops known as the Tetas de Cayey, which has been classified as a subtropical rainforest.
