

Stahlia monosperma

Cobana negra

Family (Fabaceae)

Kingdom (Plantae)

Status (Threatened)

Description

Is a threatened, medium-sized evergreen tree (25–50 ft) endemic to Puerto Rico and the Dominican Republic. It is found in coastal forests and seasonally flooded wetlands, often near mangroves, characterized by its glossy foliage, cream-colored flowers, and fleshy, red, apple-scented fruit.

Location/Habitat

Evergreen tree endemic to Puerto Rico, Vieques, and the Dominican Republic, thriving in coastal, seasonally flooded wetlands, often near mangrove communities. It is primarily located in southwestern Puerto Rico (Cabo Rojo), the northeast (Río Grande), and on Vieques Island, often on private lands.
