

Vernonia proctorii

no common name – a shrub

Family (Asteraceae)

Kingdom (Plantae)

Status (estado)

Description

A small, erect shrub that grows up to about 1.5 meters tall. It has densely hairy stems and small ovate leaves with a green upper surface and a silvery, hairy underside. Its flowers are bright purple and grow in small terminal clusters. The plant produces small, hairy achenes as fruit.

Location/Habitat

Found in the subtropical dry forest zone of Puerto Rico, characterized by deciduous vegetation with full ground cover. The habitat includes plants with succulent or tough leaves, as well as spines and thorns, with trees typically under 15 meters tall. Fires are frequent in this environment, supported by grasses and accumulated organic debris.
